

INTERROUTE ONE

Interoute One is our powerful yet simple IP voice proposition for customers who are looking to reduce their costs, with no major additional investment and without compromising on quality or security.

Interoute One provides a secure business quality voice over IP solution that gives:

- Free calls between company offices – no matter where in the world they are
- Competitive worldwide outbound call rates
- Worldwide local inbound DDI numbers
- Centralised management and cost control

Interoute One can be delivered over multiple access methods and is designed to seamlessly integrate with existing mixed telephony architectures across a number of countries.

All the benefits of IP telephony are now available without the need of purchasing new hardware or embarking on a major change programme.

Interoute One delivers free on-net calls, a highly competitive worldwide outbound calling rate card and local inbound DDI numbers without the need of expensive upgrades to existing telephony hardware. Therefore, no matter what the mix of telephony equipment you have, you can benefit from the advantages of VoIP. This saves both time and money.

In addition, Interoute has developed Interoute One for Microsoft Unified Communications (Lync & OCS). As Interoute One is a network based solution it means that no additional equipment is required and by using our online sign-up facility, the service can be active within 10 minutes.

Interoute One can be easily integrated to the following telephony systems as stand alone or as part of an Interoute IP VPN solution:

1. Interoute One for PBX
2. Interoute One for IP PBX
3. Interoute One for Microsoft UC

The unique power of Interoute One is where mixed telephony architecture is deployed across a number of countries. Interoute One can seamlessly connect to each of the systems allowing all sites to benefit from Interoute One without incurring large expense.

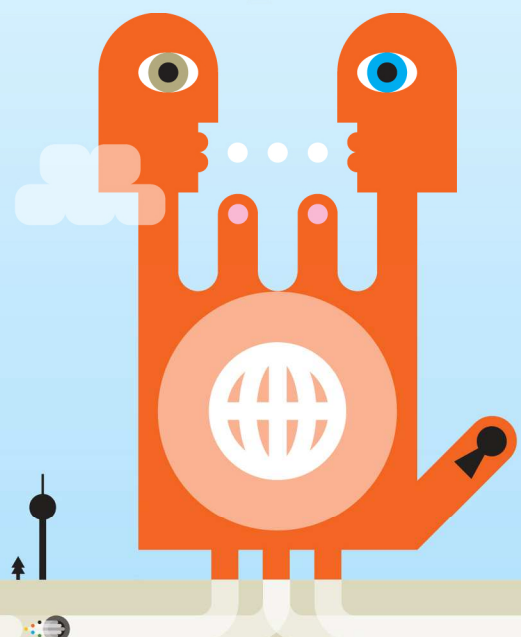

Worldwide local inbound numbers

Interoute One can provide local inbound numbers for over 40 countries which can then be terminated at any other location on your telephony network.

This gives you the ability to provide a local number but manage the calls out of a different country at no additional cost. This is only available if you are accessing Interoute One via an IP solution.

For calls received on these inbound numbers, the CLI received from the originating network will be passed transparently to the customer's telephony platform.

However, due to the cascading nature of the CLI handover some variations in the format can occur and IRT can not be held responsible if this occurs outside of its network.

A free trial offer

To experience the power of Interoute One, apply now for a free trial. This can be easily activated via an on-line application process at www.interouteone.com.

Key features

- Free on-net calls
- Worldwide outbound calling
- Worldwide local inbound DDI numbers in over 40 countries
- Secure connection
- Business quality VoIP
- No need to upgrade existing voice solution
- On-line, real time management reports via dedicated and secure Internet Hub
- Call barring of certain number types
- No change to existing telephone number range
- Per second billing
- Invoices are presented in PDF and XML format

Key benefits

- Fast implementation means cost savings realised immediately
- A low cost worldwide calls package
- Easy integration with a mix of telephony systems across a number of countries
- No set-up charges
- No upfront or hidden costs
- Bound by commercial contracts and service level agreement
- Easy to manage – from one web page you can control, monitor and access your entire voice service
- Call Detail Records (CDR's) are in a clear and helpful format
- Trusted by a large number of Corporates

For Microsoft Unified Communications

In addition to the general features and benefits above, Interoute One for Microsoft UC provides the following unique features and benefits:

- Fast, easy and low cost integration
- Free trial – apply online for a no obligation trial
- No new hardware required
- Enables direct Click to Call e.g. from a phone number in an e-mail
- Outlook contacts becomes instantly the phone book
- Reduce mobile roaming costs. Roaming is on average 33% of a Corporates mobile bill. Interoute One for Lync and OCS can significantly reduce this cost as wherever the internet is available the user can connect to Interoute One
- Remote office workers can use the same technology they have in their office on their desktop, including their business phone

Technical details

Interoute One for PBX

Legacy PBX's can now benefit from VoIP telephony without the need to upgrade hardware to an IP based solution.

Interoute One for IP PBX

Connection for IP PBX is via SIP trunking or H323 trunking.

Interoute One for Microsoft UC

Interoute One is the unique solution that unlocks the full potential of Microsoft Lync Server 2010 and Office Communications Server 2007 R2 by adding telephony voice services. Interoute is a Microsoft qualified supplier of SIP Trunking for Lync and OCS 2007 R2.
